Source of Acquisition

The Blacksburg Electronic Village Collection was donated to Special Collections in 2002.

Processing Information

The processing, arrangement, and description of the Blacksburg Electronic Village Collection commenced in October 2006 and was completed in November 2006.

Preferred Citation

Researchers wishing to cite this collection should include the following information: [identification of item], [box], [folder], Blacksburg Electronic Village Collection, Ms2006-018, Special Collections and University Archives, Virginia Tech, Blacksburg, Va.

Administrative History

The concept of an online community network for Blacksburg, Virginia originated in 1991. An outreach project of Virginia Tech, the Blacksburg Electronic Village (BEV) would seek to bring Internet access to the entire community. Collaborative efforts during the next two years among Virginia Tech, the town of Blacksburg, and Bell Atlantic of Virginia prepared the town's information infrastructure by installing digital switching equipment and a fiber backbone. The first beta test of BEV software--including Internet, e-mail and gopher clients--occurred in Spring 1993, and BEV was formally launched in October 1993.

Linking individuals, government agencies, commercial enterprises, and community organizations through fiber-optic technology, BEV was among the earliest online community networks and received international attention. By 1997, more than 80 percent of the community's residents had computers--many of them connected to the Internet through Virginia Tech's modem pool--and Blacksburg was dubbed by the press "the most wired town in America."

By 1996, the Virginia Tech modem pool was becoming overloaded, and users not affiliated with Virginia Tech were required to switch to independent Internet providers. BEV continued to work with local individuals, the town of Blacksburg, and non-profit organizations, providing website development and support, e-mail accounts, and civic websites, among other services. However, in the mid-2000s, many options in the private sector became available for website design and hosting in this region, along with many free, user-friendly services for email and group communications. BEV moved to complete its shift away from email and hosting services and to devote resources to new, more forward-looking initiatives. As a result, BEV retired its remaining client services at the end of 2015.

Scope and Content

This collection contains materials relating to Blacksburg Electronic Village (BEV), an experimental online community network connecting individuals, government agencies, businesses and organizations in Blacksburg, Virginia. The collection contains such materials as correspondence, BEV in-house publications (including brochures and fact sheets), presentations (consisting largely of overhead transparencies), clippings from magazines, newspapers, and newsletters; and a few reports issued by external organizations and agencies.
